PATHOLOGY REPORT

Clinical Information.	Gastric fundal polyp removed by biopsy forceps.
Nature of specimen.	Endoscopic excision biopsy.

GROSS:

Soft tissue fragments collectively measured 0.9 cm, totally embedded in one cassette

MICROSCOPIC:

Sections show polypoid gastric mucosal fragments with hyperplastic gastric glands featuring prominent foveolar hyperplasia, characterized by pit elongation and tortuosity. Associated moderate inflammatory infiltrate is noted. Moderate activity is evidenced by neutrophilic infiltration of the glandular epithelium. Luminal bacteria consistent with *Helicobacter pylori* are present.

DIAGNOSIS:

Stomach, endoscopic excision biopsy:

- Fundic Gland Polyp
- Chronic Active Gastritis
- *Helicobacter pylori*: Positive.
- Negative for atypia and malignancy.
