## PATHOLOGY REPORT

<b>Clinical Information.</b>	Acute appendicitis with early appendicular mass.
<b>Nature of specimen.</b>	Appendectomy.

### GROSS:

Appendix measuring 3 x 1 cm with 1.5 cm of attached fat, exhibiting a thickened wall measuring 0.4 cm and a mucosal ulceration.

### MICROSCOPIC:

Appendicular lumen is full of neutrophils that extend into wall in between the mucosal associated lymphoid tissue together with lymphocytes and plasma cells. Such infiltrate extends to periappendicular fat amounting at abscess formation and fibrosis. No evidence of specific granulomas. No evidence of appendicular tumors.

### DIAGNOSIS:

#### Appendectomy:

- Acute (suppurative) on top of chronic appendicitis with periappendicitis and abscess formation with fibrosis.
- Negative for malignancy.
