

Pt. Name:	اعتدال علي شاهر قاسم الصلوي		Lab Number:	2401-2026
Pt. Age:	Adult.	Gender:	Female	Received date: 2026-04-16
Referred By:	د / ريم الصلوي		Reported date:	2026-04-21

PATHOLOGY REPORT

Clinical Information.	Cervical polyp.
Nature of specimen.	Cervical polypectomy.

GROSS:

Soft tissue fragment measured 1x0.8x0.7 cm, totally embedded.

MICROSCOPIC:

Polypoid lesion composed of hyperplastic endocervical mucous glands and Napolthian cysts, covered by partially ulcerated columnar endocervical epithelium. Stroma is fibrotic and vascular and shows moderate infiltration by inflammatory cells. No evidence of atypia or malignancy.

DIAGNOSIS:

Cervical polypectomy:

- Inflamed hyperplastic endocervical polyp with Napolthian cysts.
- Negative for atypia.
