## PATHOLOGY REPORT

<b>Clinical Information.</b>	Adenomyosis with endometrial hyperplasia.
<b>Nature of specimen.</b>	Total hysterectomy with bilateral salpingectomy and Rt. oophorectomy

### GROSS:

Total hysterectomy with bilateral salpingectomy and Rt. oophorectomy specimen showed a uterus measuring 9.5 x 6 x 4 cm with a 2 cm thick wall. Endometrial thickness was 0.5 cm. The cervix was 3.5 cm long. The right ovary measured 2 x 1.3 x 1 cm and was grossly unremarkable. Fallopian tubes measured 5 cm long, each, both were grossly unremarkable.

### MICROSCOPIC:

Endometrium shows hyperplastic endometrial glands, is non-secretory, it is formed of slightly branched glands lined by 1-2 layers of cells. Stroma is cellular. No evidence of complex glandular pattern. Some of the hyperplastic endometrial glands are seen embedded within superficial myometrium. Cervix show Naphthian cysts. Rt. ovary and both tubes are unremarkable.

### DIAGNOSIS:

#### Total hysterectomy with bilateral salpingectomy and Rt. oophorectomy:

- Mild simple endometrial hyperplasia, negative for atypia.
- Superficial adenomyosis.
- Rt. ovary and both Fallopian tubes are unremarkable.
- Negative for malignancy.
