Pt. Age:	70 years.	Gender:	Female	Received date:	2026-04-20
Referred By:	o.p		Reported date:	2026-04-22	

PATHOLOGY REPORT

Clinical Information.	Small firm yellowish conjunctival growth of three months' duration.
Nature of specimen.	Incision biopsy

GROSS:

Soft tissue fragment measured 0.2 cm, totally embedded.

MICROSCOPIC:

Polypoid lesion with attenuated surface epithelial covering. Core shows proliferating capillaries lined by mature endothelium with dominantly empty lumens. No evidence of specific granulomas. No evidence of atypia or malignancy.

DIAGNOSIS:

Conjunctiva, biopsy:

- Pterygium.
- Negative for malignancy.
