PATHOLOGY REPORT

Clinical Information.	Ampullary lesion.
Nature of specimen.	Endoscopic biopsies.

GROSS:

Soft tissue fragments collectively measured 0.6 cm, totally embedded.

MICROSCOPIC:

Focally ulcerated duodenal mucosa moderately to markedly infiltrated by lymphocytes, plasma cells and some neutrophils. Villi are intact and negative for atrophy. No evidence of specific granulomas. No evidence of malignancy.

DIAGNOSIS:

Ampullary lesion, endoscopic biopsy:

- Moderate chronic duodenitis with active inflammatory ulceration.
- Negative for atypia or malignancy.
