PATHOLOGY REPORT

Clinical Information.	Calcified medullary lesion in the proximal left femur.
Nature of specimen.	Excision

GROSS:

Bone fragments collectively measured 4x3.5x0.6 cm, totally embedded.

MICROSCOPIC:

A bony lesion composed of dysplastic irregular bone trabeculae lacking osteoblastic rimming and showing the characteristic Chinese letter pattern. Intervening stroma shows proliferating fibrocytes. No evidence of malignancy.

DIAGNOSIS:

Lt. Proximal femur lesion, biopsy:

- Fibrous dysplasia.
- Negative for malignancy.
