### PATHOLOGY REPORT

<b>Clinical Information.</b>	Perforated appendicitis; was found intraoperatively to have an appendicular mass, with perforation at its base, and an autoamputation.
<b>Nature of specimen.</b>	Appendiceconomy

#### GROSS:

Received is a 3x0.8 cm perforated appendix with 2 cm of attached mesoappendiceal fat. The serosa is ulcerated and grey. Also received a separate fatty soft tissue fragment measured 2x1 cm.

#### MICROSCOPIC:

Appendicular lumen is full of neutrophils that extend into wall in between the mucosal associated lymphoid tissue together with lymphocytes and plasma cells. Such infiltrate extends to periappendicular fat, amounting at abscess formation. Impacted fecolith is noted. No evidence of specific granulomas. No evidence of appendicular tumors.

#### DIAGNOSIS:

##### Appendectomy:

- Acute (suppurative) on top of chronic appendicitis with periappendicitis with perforation and abscess formation.
- Negative for malignancy.
