## PATHOLOGY REPORT

|                              |                          |
|------------------------------|--------------------------|
| <b>Clinical Information.</b> | Panerythema gastropathy. |
| <b>Nature of specimen.</b>   | Endoscopic biopsies.     |

### GROSS:

Soft tissue fragments collectively measured 0.7 cm, totally embedded.

### MICROSCOPIC:

Gastric mucosa showing moderate infiltration by lymphocytes and plasma cells. There is evidence of inflammatory activity manifested by some neutrophils infiltrating glands. H. pylori forms are not seen. No evidence of intestinal metaplasia, atypia or malignancy.

### DIAGNOSIS:

#### Stomach, Endoscopic biopsy:

- Moderate chronic gastritis with associated moderate inflammatory activity.
- H. pylori not identified.
- Negative for dysplasia or malignancy.
