PATHOLOGY REPORT

Clinical Information.	Two left breast masses BIRADS III.
Nature of specimen.	Excision biopsy.

GROSS:

Two well circumscribed rubbery whitish soft tissue masses measured 3.8x3x2.3 cm and 2.2x1.8x1.5 cm.

MICROSCOPIC:

Benign well encapsulated tumors formed of proliferating breast ducts and stromal fibrocytes. The latter predominate in the lesion thus compressing ducts into slit-like structures.

DIAGNOSIS:

Lt. Breast masses, excision biopsy:

- Intraductal fibroadenomas.
- Negative for malignancy.
