## PATHOLOGY REPORT

Clinical Information.	Rt. knee popliteal fossa cyst? Backer's cyst.
Nature of specimen.	Excision

### GROSS:

Soft tissue fragment measured 3.5x2.8x2 cm, showing cyst measuring 2.5x2.5 cm.

### MICROSCOPIC:

Sections revealed a dense, fibrous cyst wall with focal hyalinization and a synovial lining that varies from hyperplastic to denuded. The lumen contains proteinaceous fluid and fibrin, while the underlying stroma shows mild chronic inflammation and scattered hemosiderin-laden macrophages. No cellular atypia is present.

### DIAGNOSIS:

#### Rt. knee cyst, excision:

- Backer's (popliteal) cyst.
- Negative for malignancy.
