## PATHOLOGY REPORT

<b>Clinical Information.</b>	Right proximal tibia lytic lesion.
<b>Nature of specimen.</b>	Biopsy

### GROSS:

Soft tissue and bone fragments collectively measured 7.8x6.5x1.5 cm, the largest measured 3x3x1.5 cm.

### MICROSCOPIC:

A benign bone lesion composed of vascular-like dilated spaces surrounded by compressed fibrotic stroma showing focal interstitial hemorrhage with very occasional osteoclastic type giant cells. Picture in correlation with radiologic appearance is consistent with aneurysmal bone cyst. No evidence of specific granulomas. No evidence of malignancy.

### DIAGNOSIS:

Right proximal tibia lyric lesion, biopsy:

- Aneurysmal bone cyst.
- Negative for malignancy.
