## PATHOLOGY REPORT

Clinical Information.	Referred blocks for immunostaining of excision biopsy of excision for a left upper chest wall mass.
Nature of specimen.	Immunohistochemistry.

### GROSS:

Ten referred paraffin blocks and ten Hx&E stained slides coded 253-26.

### MICROSCOPIC:

A cellular non-capsulated tumor showing storiform pattern of proliferating fibroblasts and histiocyte-like cells. Anaplasia is mild and mitotic activity is increased.

Immunostaining was done with appropriate positive and negative controls and revealed: CD34 diffusely positive. S100 is negative. SMA focally positive. Ki-67 labeling index about 5%.

### DIAGNOSIS:

*Lt. Upper chest wall mass, excision biopsy, referred paraffin block for review and immunostaining:*

- Dermatofibrosarcoma protuberance, low grade

### COMMENT:

For assessment of margins of excision, please refer to original pathology report.
