Referred By:	أ.د/ عبد الحكيم المتوكل		Reported date:	2026-05-01	

PATHOLOGY REPORT

Clinical Information.	Mild nodular gastric antral gastropathy.
Nature of specimen.	Endoscopic biopsies.

GROSS:

Soft tissue fragments collectively measured 0.6 cm, totally embedded in one cassette.

MICROSCOPIC:

Gastric mucosa showing mild atrophy of glands and moderate infiltration by lymphocytes and plasma cells but no evidence of neutrophils indicating absence of activity. *H. pylori* characteristic forms are seen colonizing glands. No evidence of intestinal metaplasia, atypia or malignancy. Since cytotoxin-producing *H. pylori* are capable of inducing complications, their serological detection is recommended.

DIAGNOSIS:

Stomach, endoscopic biopsies :

- *H. pylori*-associated mild chronic atrophic gastritis.
- Negative for intestinal metaplasia, dysplasia or malignancy .
