PATHOLOGY REPORT

Clinical Information.	Urinary bladder mass.
Nature of specimen.	TUR

GROSS:

Soft tissue fragments collectively measured 4x3.5x1 cm, totally embedded.

MICROSCOPIC:

Invasive urothelial tumor formed dominantly of sheets and irregular groups of malignant transitional epithelial cells of moderate degree of anaplasia and mitosis. These tumor groups are seen invading the underlying lamina propria and very close to the muscularis propria without actual penetration. Areas of necrosis are seen.

DIAGNOSIS:

Urinary bladder mass, TUR:

- Invasive transitional cell carcinoma, grade 2.
- Tumor infiltrates reaching very close to muscularis propria without actual penetration (Stage pT1).
