## PATHOLOGY REPORT

|                              |   |
|------------------------------|---|
| <b>Clinical Information.</b> | scattered erosions at the left side of the colon. |
| <b>Nature of specimen.</b>   | Endoscopic biopsies.                              |

### GROSS:

Soft tissue fragments collectively measured 0.6 cm, totally embedded in one cassette.

### MICROSCOPIC:

Colonic mucosa showing focal superficial erosion with mild reduction in the number of mucigenic cells and moderate infiltration by lymphocytes, plasma cells and neutrophils. However, crypt abscesses are not identified. No evidence of atypical or malignant cells.

### DIAGNOSIS:

#### Lt. Colon, endoscopic biopsy:

- Moderate chronic colitis with inflammatory activity and focal superficial erosion.
- Negative for atypia and malignancy.
