PATHOLOGY REPORT

Clinical Information.	Bile reflux, patchy erythema, multiple erosions, and a multinodular gastric mucosa.
Nature of specimen.	Endoscopic biopsies.

GROSS:

Soft tissue fragments collectively measured 0.6 cm, totally embedded.

MICROSCOPIC:

Gastric mucosa showing superficial erosions With mild atrophy of gastric glands and moderate infiltration by lymphocytes and plasma cells. There is evidence of inflammatory activity manifested by some neutrophils infiltrating glands. H. pylori characteristic forms are not identified. No evidence of intestinal metaplasia, atypia or malignancy.

DIAGNOSIS:

Stomach, Endoscopic biopsy:

- Moderate chronic active gastritis with erosions
- H pylori is not identified.
- Negative for dysplasia or malignancy.
