PATHOLOGY REPORT

Clinical Information.	Tongue and buccal mucosal lesions.
Nature of specimen.	Incisional biopsy.

GROSS:

Two biopsies were received:

- 1- Buccal mucosa: two soft tissue fragments collectively measured 0.9x0.7x0.5 cm, totally embedded.
- 2- Tongue: soft tissue fragments collectively measured 0.8x0.6x0.5 cm, totally embedded.

MICROSCOPIC:

A benign exophytic mucosal lesion, formed of broad papillary formations of hyperplastic and acanthotic stratified squamous epithelium. Submucosa shows infiltration by few lymphocytes and plasma cells. Squamous cells show koilocytosis indicative of HPV infection. No evidence of atypia or malignancy

DIAGNOSIS:

Tongue and buccal lesions, incisional biopsy:

- Verruca vulgaris.
- Negative for malignancy.
