PATHOLOGY REPORT

Clinical Information.	A mass between the eyebrows that has been present for many years.
Nature of specimen.	Excision biopsy

GROSS:

Skin polyp measuring 1.9 x 0.7 x 0.6 cm.

MICROSCOPIC:

Intact skin with a non-capsulated dermal lesion formed of nests of focally pigmented nevocellular cells that exhibit neural maturation in deeper parts of the lesion. No evidence of any junctional component or malignancy and excision of lesion appears complete.

DIAGNOSIS:

Skin, between eyebrows, excision biopsy:

- Polypoid dermal nevus.
- Margins are free of tumor.
