## PATHOLOGY REPORT

Clinical Information.	Ocipital swelling ? encephalcele.
Nature of specimen.	Excision biopsy

### GROSS:

One skin elipse measured 4x3.5x2 cm, totally embedded.

### PHOTOGRAPH

### MICROSCOPIC:

Sections from the swelling shows a focus of herniated brain tissue (slide A) with surrounding fibrotic meningeal coverings and fibroadipose tissue. Picture is consistent with encephalomeningocele. No evidence of specific granulomas. No evidence of malignancy.

### DIAGNOSIS:

#### Occipital swelling, excision:

- Consistent with meningocele
- Negative for malignancy.
