PATHOLOGY REPORT

Clinical Information.	Rt. breast mass BIRADS III.
Nature of specimen.	Tru-cut biopsy

GROSS:

Tissue cores up to 1 cm, totally embedded.

MICROSCOPIC:

Submitted cores show a fibroepithelial lesion formed of proliferating breast ducts with focal hyperplasia of the lining epithelial ductal cells. Separating stroma is diffusely hyalinized and hypocellular with focal myxoid change. No evidence of atypia or malignancy. Picture is consistent with a fibroepithelial lesion which could be a fibroadenoma or benign phyllodes tumor.

DIAGNOSIS:

Rt. breast mass, Tru-cut biopsy:

- Fibroepithelial lesion, possibly fibroadenoma or benign phyllodes tumor.
- Negative for malignancy.

COMMENT:

For definitive subtyping and establishment of the exact biological category, adequate excision of the mass is advised.
