PATHOLOGY REPORT

Clinical Information.	Proctosigmoiditis.
Nature of specimen.	Endoscopic biopsies.

GROSS:

Soft tissue fragments collectively measured 0.7 cm, totally embedded.

MICROSCOPIC:

Intact colonic mucosa with mild reduction in the number of mucigenic cells and mild infiltration by lymphocytes, plasma cells and neutrophils. However, crypt abscesses are not identified. No evidence of atypical or malignant cells.

DIAGNOSIS:

Rectosigmoid, endoscopic biopsy:

- Mild chronic proctosigmoiditis with minimal inflammatory activity.
- Negative for epithelial dysplasia.
- Negative for malignancy.
