<b>Pt. Age:</b>	22 years.	<b>Gender:</b>	Male	<b>Received date:</b>	2026-05-03
<b>Referred By:</b>	د / مهند السالم		<b>Reported date:</b>	2026-05-04	

### PATHOLOGY REPORT

<b>Clinical Information.</b>	Rectal bleeding. Colonoscopy revealed left colitis.
<b>Nature of specimen.</b>	Endoscopic biopsies.

#### GROSS:

Soft tissue fragments collectively measured 0.5 cm, totally embedded.

#### MICROSCOPIC:

Intact colonic mucosa with mild reduction in the number of mucigenic cells and moderate infiltration by lymphocytes, plasma cells and neutrophils. However, crypt abscesses are not identified. No evidence of atypical or malignant cells.

#### DIAGNOSIS:

Colon, endoscopic biopsy:

- Moderate chronic colitis with minimal inflammatory activity.
- Negative for malignancy.
