PATHOLOGY REPORT

Clinical Information.	Pancreatic cyst.
Nature of specimen.	FNAC

GROSS:

One smear was prepared and pap stained from submitted 20 ml orange fluid.

MICROSCOPIC:

Cellular smear composed of numerous lipid-laden foamy macrophages intermixed with scattered inflammatory cells, set against a background of granular proteinaceous debris. The macrophages exhibit abundant, vacuolated cytoplasm and regular, eccentric nuclei without nuclear atypia. There is an absence of high-grade nuclear atypia, mitotic figures, or cohesive clusters of malignant epithelial cells.

DIAGNOSIS:

Pancreatic cyst, FNAC:

- Benign pancreatic cyst fluid compatible with a pseudocyst.
- Negative for malignant cells.
