

Pt. Name:	نجيب عبدالله ابراهيم قشيش		Lab Number:	2999-2026	
Pt. Age:	28 years.	Gender:	Male	Received date:	2026-05-04
Referred By:	د/ عبده وادي		Reported date:	2026-05-07	

PATHOLOGY REPORT

Clinical Information.	The patient shows significant healing of a previous gastric ulcer, but currently presents with persistent tissue abnormalities (granularity, thickening, and nodularity) in the antral and pyloric regions of the stomach, along with mild pyloric stenosis.
Nature of specimen.	Endoscopic biopsy

GROSS:

Soft tissue fragments collectively measured 1 cm, totally embedded.

MICROSCOPIC:

Gastric mucosa showing marked infiltration by lymphocytes and plasma cells. There is evidence of inflammatory activity manifested by some neutrophils infiltrating glands. *H. pylori* characteristic forms are seen. Focal intestinal metaplasia is noted, however there is no evidence of atypia or malignancy.

DIAGNOSIS:

Stomach, Endoscopic biopsy:

- *H. pylori* associated chronic gastritis with associated moderate inflammatory activity and focal intestinal metaplasia.
- Negative for dysplasia or malignancy.
