PATHOLOGY REPORT

Clinical Information.	Endometrial polyp.
Nature of specimen.	Endometrial curetting.

GROSS:

Bloody soft tissue fragments collectively measured 3.3 x 3 x 1 cm, totally embedded.

MICROSCOPIC:

Non-secretory endometrium formed of branching glands lined by 1-2 layers of cells. Stroma is cellular. Picture is consistent with anovulatory cycle. The observed changes represent endometrial architectural changes as a result of unopposed estrogenic stimulation in such anovulatory cycle. No evidence of endometritis. Also submitted, polypoid lesion (about 1.2x1.6 cm) formed of non-secretory hyperplastic endometrium, it is formed of branching glands exhibiting moderate cystic dilatation with focal crowding. Glands are lined by 1-3 layers of cells. Stroma is compact with scattered thick walled blood vessels. No evidence of complex pattern, atypia or malignancy.

DIAGNOSIS:

D & C biopsy and polypectomy:

- Hyperplastic endometrial polyp.
- Disordered proliferative endometrium (anovulatory cycle).
- Negative for atypia.
