## PATHOLOGY REPORT

Clinical Information.	Known case of esophageal carcinoma, who has undergone a biopsy from the vocal cord.
Nature of specimen.	Endoscopic biopsies.

### GROSS:

Soft tissue fragments collectively measured 1 cm, totally embedded.

### MICROSCOPIC:

Sections showing an invasive carcinoma formed of solid groups of moderately keratinized squamous cells exhibiting moderate anaplasia and mitosis. Separating stroma showing moderate lymphoplasmacytic infiltration. Areas of necrosis are observed.

### DIAGNOSIS:

#### Vocal cord lesion, biopsy:

- Squamous cell carcinoma, grade 2.

### Pathologist

Prof. Dr. Neveen Tahoun, MD, PhD
