PATHOLOGY REPORT

Clinical Information.	Diffuse gastric erythema with granularity and erosions.
Nature of specimen.	Endoscopic biopsies.

GROSS:

Soft tissue fragments collectively measured 0.5 cm, totally embedded.

MICROSCOPIC:

Gastric mucosa e showing superficial erosions with mild glandular atrophy and moderate infiltration by lymphocytes and plasma cells. Neutrophils are seen infiltrating glands thus indicating activity. H. pylori characteristic forms are seen colonizing glands. No evidence of intestinal metaplasia, atypia or malignancy.

DIAGNOSIS:

Stomach, endoscopic biopsy:

- H. pylori-associated chronic atrophic erosive gastritis with moderate inflammatory activity.
- Negative for atypia and malignancy.
