PATHOLOGY REPORT

Clinical Information.	Hyperemic gastric antrum with few erosions.
Nature of specimen.	Endoscopic biopsies.

GROSS:

Soft tissue fragments collectively measured 0.4 cm, totally embedded.

MICROSCOPIC:

Gastric mucosa showing superficial erosions with mild atrophy of glands and mild infiltration by lymphocytes and plasma cells. There is evidence of inflammatory activity manifested by neutrophils infiltrating glands. H. pylori characteristic forms are seen. No evidence of intestinal metaplasia, atypia or malignancy.

DIAGNOSIS:

Stomach, Endoscopic biopsy:

- H. pylori associated chronic erosive atrophic gastritis with associated moderate inflammatory activity.
- Negative for dysplasia or malignancy.
