## PATHOLOGY REPORT

<b>Clinical Information.</b>	Suspected osteomyelitis of the anterior maxilla following a tooth extraction.
<b>Nature of specimen.</b>	Incisional biopsy.

### GROSS:

Soft tissue fragment measured 0.8x0.7x0.5 cm, totally submitted.

### MICROSCOPIC:

Sections showing an invasive carcinoma formed of solid groups of markedly keratinized squamous cells exhibiting mild anaplasia and mitosis. Separating stroma showing moderate lymphoplasmacytic infiltration.

### DIAGNOSIS:

Anterior maxillary lesion related to tooth, biopsy:

- Squamous cell carcinoma, grade 1.
