## PATHOLOGY REPORT

|                              |  |
|------------------------------|--|
| <b>Clinical Information.</b> | Wider excision of tongue verrucous squamous cell carcinoma with positive margin ( pathology number 2976-2026 on 5 May 2026). |
| <b>Nature of specimen.</b>   | Wide excision  |

### GROSS:

Three specimens were received for examination:

- Specimen 1: designated as wider excision, received oriented for margins: consisted of a soft tissue piece measuring 2 x 1.7 x 1 cm, which exhibited an ulcerated grey area measuring 1.5 x 1.2 cm. The lesion was located 0.3 cm from the superior margin, 0.2 cm from the inferior margin, 0.3 cm from the medial margin, and 0.3 cm from the lateral margin.
- ?Specimen 2: designated as extraposterior margin 12 o'clock: consisted of one grey soft tissue piece measuring 0.7 x 0.5 cm, totally embedded.
- Specimen 3: designated as extra medial margin 3 o'clock consisted of one soft tissue piece measuring 1.1 x 0.6 x 0.3 cm, totally embedded.

### MICROSCOPIC:

Specimen Site: Tongue.

Type of operation: Wider excision.

Histologic Type: Verrucous Squamous Cell Carcinoma.

Tumor Size: 2.1 cm (greatest dimension, in original excision biopsy).

Depth of Invasion (DOI): 1.7 cm (17 mm).

Lymphovascular Invasion (LVI): Not identified.

Perineural Invasion (PNI): Not identified.

Margin Status: All negative.

#### Pathologic Staging (AJCC 8th Edition)

Primary Tumor (pT): pT3

- Although the tumor diameter is 2.5 cm (T2 by size), a DOI greater than 10 mm upstages it to T3.

Regional Lymph Nodes (pN): pNX.

No lymph nodes submitted for evaluation.

Distant Metastasis (pM): pMX.

Not assessed.

**DIAGNOSIS:**

Tongue mass, wider excision:

- Verrucous Squamous Cell Carcinoma.
- Margins of excision are free.
- Pathologic stage: pT3 pNX pMX (AJCC 8th Edition).
