## PATHOLOGY REPORT

Clinical Information.	Cervical polyp.
Nature of specimen.	Pan hysterectomy

### GROSS:

Pan hysterectomy specimen; uterus measured 8x6x4 cm with myometrial thickness of 2 cm and an endometrial thickness of 0.4 cm. Cervix is 3 cm long, showing a polyp measuring 1.5 cm. The right and left ovaries both measured 2x1.3x1 cm and are grossly unremarkable. Both the right and left fallopian tubes measured 5 cm in length and are grossly unremarkable.

### MICROSCOPIC:

Endometrium is non-secretory, it is formed of branching glands exhibiting moderate cystic dilatation with focal crowding. Glands are lined by 1-3 layers of cells in a compact stroma. No evidence of atypia or malignancy. complex glandular pattern. Some of these hyperplastic glands are seen embedded within superficial myometrium. Cervical polyp composed of hyperplastic endocervical mucous glands, covered by focally ulcerated columnar endocervical epithelium. Stroma is fibrotic and vascular and shows mild infiltration by inflammatory cells. No evidence of endometrial tissue . No evidence of atypia or malignancy. Ovaries and fallopian tubes are unremarkable.

### DIAGNOSIS:

#### Pan hysterectomy:

- Moderate cystic endometrial hyperplasia, negative for atypia.
- Superficial adenomyosis.
- Hyperplastic endocervical polyp.
- Negative for atypia or malignancy.
