<b>Referred By:</b>	د/ احمد الصيادي		<b>Reported date:</b>	2026-05-11	

## PATHOLOGY REPORT

<b>Clinical Information.</b>	Left retroperitoneal small mass lesion.
<b>Nature of specimen.</b>	Tru-cut biopsy.

### GROSS:

Five cores up to 1.3 cm, long, totally embedded in one cassette.

### MICROSCOPIC:

Submitted core biopsy entirely formed of fibrovascular and mature adipose tissue with areas of interstitial hemorrhage. No evidence of specific granulomas. No evidence of malignancy.

### DIAGNOSIS:

*Retroperitoneum, mass, guided core biopsy:*

- Mature fibrovascular and adipose tissue.
- Negative for malignancy.

### COMMENT:

Given clinical findings regarding presence of mass lesion, please make sure the submitted material is representative from the described mass. Otherwise, rebiopsy will be advised if malignancy is suspected.
