PATHOLOGY REPORT

Clinical Information.	Rectal ulcer.
Nature of specimen.	Endoscopic biopsy

GROSS:

Soft tissue fragments collectively measured 1 cm, totally embedded in one cassette.

MICROSCOPIC:

Submitted fragments showing focally ulcerated rectal mucosa with focally reduced mucigenic cells and dense infiltration by lymphocytes, plasma cells and neutrophils. No evidence of specific granulomas. No evidence of crypt abscesses. Picture is consistent with solitary rectal ulcer.

DIAGNOSIS:

Rectum, colonoscopic biopsy:

- Active inflammatory ulceration consistent with solitary rectal ulcer
- Negative for malignancy.

COMMENT:

Follow-up till healing is recommended to insure that these biopsies are representative and not missing an underlying unsampled more serious pathology.
