Pt. Age:	Adult.	Gender:	Female	Received date:	2026-05-07
Referred By:	د/ بدرية باوزير		Reported date:	2026-05-12	

PATHOLOGY REPORT

Clinical Information.	Premenopausal bleeding.
Nature of specimen.	D & C biopsy.

GROSS:

Soft tissue fragments collectively measured 3.5x3x0.8 cm, totally embedded.

MICROSCOPIC:

Endometrium is non-secretory and hyperplastic, it is formed of branching complex glands exhibiting focal crowding and lined by 1-3 layers of cells. Stroma is cellular. No evidence of atypia or malignancy.

DIAGNOSIS:

Endometrial Biopsy:

- Mild adenomatous (complex) endometrial hyperplasia.
- Negative for atypia.
