PATHOLOGY REPORT

Clinical Information.	Multiple perforated ulcers.
Nature of specimen.	Excision of perforated areas

GROSS:

Two soft tissue fragments measured 2x1.5x0.8 cm and 2.7x2x0.9 cm, totally embedded.

MICROSCOPIC:

Sections show ulcerated and perforated gastric wall tissue with extensive acute and chronic inflammatory infiltrate, fibrinopurulent exudate, hemorrhage, and widespread devitalization. Residual viable gastric mucosa demonstrates chronic active *Helicobacter pylori*-associated gastritis. No evidence of malignancy.

DIAGNOSIS:

Stomach, excision of perforated areas:

- Perforated gastric peptic ulcer with chronic active *Helicobacter pylori*-associated gastritis and extensive devitalization.
- Negative for malignancy.
