PATHOLOGY REPORT

Clinical Information.	Pan-gastropathy characterized by hyperemia, edema, and nodularity (predominantly in the antrum), alongside submucosal hemorrhagic spots.
Nature of specimen.	Endoscopic biopsies.

GROSS:

Soft tissue fragments collectively measured 1 cm, totally embedded,

MICROSCOPIC:

Gastric mucosa e showing superficial erosions with mild glandular atrophy and moderate infiltration by lymphocytes and plasma cells. Neutrophils are seen infiltrating glands thus indicating activity. *H. pylori* characteristic forms are seen colonizing glands. No evidence of intestinal metaplasia, atypia or malignancy.

DIAGNOSIS:

Stomach, endoscopic biopsy:

- ***H. pylori*-associated chronic atrophic erosive gastritis with moderate inflammatory activity.**
- **Negative for atypia and malignancy.**
