

Pt. Name:	أمجاد حسن محمد علي		Lab Number:	3214-2026	
Pt. Age:	20 years.	Gender:	Female	Received date:	2026-05-11
Referred By:	د/ سميرة التويتي		Reported date:	2026-05-16	

PATHOLOGY REPORT

Clinical Information.	Suspected vesicular mole.
Nature of specimen.	Uterine contents (placenta)

GROSS:

Soft tissue fragments collectively measured 6.5x5.8x1.5 cm, totally embedded.

MICROSCOPIC:

Submitted material shows dimorphic population of focally avascular edematous large and small chorionic villi together with fetal membranes and degenerated decidua. The villi have irregular and scalloped borders with focal trophoblastic proliferation. No evidence of fetal tissues. No evidence of trophoblastic atypia. No evidence of malignancy. Follow up till normalization of Beta HCG is recommended.

DIAGNOSIS:

Uterine contents, D & C:

- Hydatidiform mole, partial type.
- Negative for malignancy.
