## PATHOLOGY REPORT

Clinical Information.	Clean-based ulcer in the mucosa of the stomach prepyloric region.
Nature of specimen.	Endoscopic biopsies.

### GROSS:

Soft tissue fragments collectively measured 0.8 cm, totally embedded.

### MICROSCOPIC:

Partially ulcerated gastric mucosal fragments with moderate infiltration by lymphocytes and plasma cells. Neutrophils are seen infiltrating glands thus indicating activity. H. pylori characteristic forms are present. Areas of intestinal metaplasia is observed. There is no evidence of atypia or malignancy.

### DIAGNOSIS:

#### Gastric , endoscopic biopsy:

- H pylori associated chronic gastritis moderate inflammatory activity and ulcerations with areas of intestinal metaplasia.
- Negative for dysplasia or malignancy.
