PATHOLOGY REPORT

Clinical Information.	Postcoital bleeding.
Nature of specimen.	Pap smear for cytology examination.

GROSS:

One unstained smear was submitted and pap stained.

MICROSCOPIC:

Smears are atrophic and shows unremarkable squamous cells, 20% intermediate and 80% parabasal. Background shows mixed bacterial flora but and no evidence of cytolysis. There is moderate increase in neutrophils. Scattered monilia characteristic yeast forms are seen. No evidence of viral or trichomonal infection. Smears are negative for intraepithelial lesion or malignancy (NILM).

DIAGNOSIS:

Pap smear conventional cytology:

- Satisfactory for evaluation.
- Atrophic changes.
- Negative for intraepithelial lesion or malignancy (NILM).
- Organisms: Monilia.
- Moderate neutrophilic infiltrate.
- Clue cells are not identified.
