PATHOLOGY REPORT

Clinical Information.	Breast mass clinically diagnosed as fibroadenoma.
Nature of specimen.	Excision

GROSS:

Well defined rubbery whitish mass received into four fragments collectively measured 7.5x7x2.8 cm, the largest measuring 4x3x2.8 cm.

MICROSCOPIC:

A benign well encapsulated tumor formed of proliferating breast ducts and stromal fibrocytes. In areas both component are represented equally (pericanalicular pattern) however, in other areas fibroblastic proliferation dominates thus compressing ducts into slit-like structures (intra canalicular pattern). No evidence of malignancy and excision looks complete.

DIAGNOSIS:

Breast Mass, Excision:

- Giant fibroadenoma, mixed type.
- Negative for malignancy.
