## PATHOLOGY REPORT

|                       |                 |
|-----------------------|-----------------|
| Clinical Information. | Cervical biopsy |
| Nature of specimen.   | Biopsy          |

### GROSS:

Soft tissue fragment measured 2.7x1.7x1 cm, totally embedded.

### MICROSCOPIC:

Partially ulcerated mucosal fragments by nests, sheets, and syncytial clusters of malignant epithelial cells with indistinct cell borders, vesicular nuclei, prominent nucleoli, and moderate amounts of eosinophilic cytoplasm. Mitotic figures are readily identified. Anaplasia is moderate to marked. The tumor is intimately admixed with a focal dense lymphoplasmacytic infiltrate.

### DIAGNOSIS:

#### Cervical biopsy:

- Squamous cell carcinoma, grade 3.

### Pathologist

Prof. Dr. Neveen Tahoun, MD, PhD
