PATHOLOGY REPORT

Clinical Information.	Rt breast mass.
Nature of specimen.	Excision biopsy

GROSS:

Fibrofatty tissue fragments collectively measured 3x2.5x1.5 cm, with the largest measuring 2.3x1.8x1.5 cm, showing rubbery whitish mass measured 1.7x1.3 cm.

MICROSCOPIC:

Breast tissue shows preserved normal lobular pattern with stromal fibrosis and adenosis. Breast ducts show mild to moderate periductal infiltration by lymphocytes, plasma cells, macrophages and neutrophils. Cytologic features are unremarkable. No evidence of malignancy.

DIAGNOSIS:

Rt. breast mass, excision biopsy:

- Fibroadenosis with periductal mastitis.
- Negative for malignancy.
