### PATHOLOGY REPORT

<b>Clinical Information.</b>	Urinary bladder mass located on the left lateral wall near the ureteric orifice.
<b>Nature of specimen.</b>	TUR

#### GROSS:

Soft tissue fragments collectively measured 2.2x1.8x0.7 cm, totally embedded.

#### MICROSCOPIC:

Invasive urothelial tumor formed of papillae, sheets and irregular groups of malignant transitional epithelial cells of mild degree of anaplasia and mitosis. These tumor groups are seen invading the underlying lamina propria. No muscularis propria included to further assess degree of tumor infiltration.

#### DIAGNOSIS:

##### Urinary bladder mass, TUR:

- Papillary transitional cell carcinoma, grade 1.
- No muscles included in this biopsy to assess stage of disease.
