## PATHOLOGY REPORT

<b>Clinical Information.</b>	Panhysterectomy
<b>Nature of specimen.</b>	Panhysterectomy

### GROSS:

Panhysterectomy specimen: The uterus measured 9.5 x 6 x 4 cm with a myometrial thickness of 2 cm and an endometrial thickness of 0.5 cm. The cervix measured 3 cm in length, showing cyst measuring 1.8 cm. The endometrial cavity revealed a greyish polyp measuring 4 x 1 cm. Rt. and Lt. ovaries measured 1.8 x 1 x 1 cm and 2x 1x 1 cm, respectively. Both the right and left fallopian tubes measured 5 cm and were grossly unremarkable.

### MICROSCOPIC:

Polyp and endometrium are hyperplastic and non-secretory, formed of branching glands exhibiting moderate cystic dilatation with focal crowdness. Glands are lined by 1-3 layers of cells in a compact stroma. No evidence of atypia or malignancy or complex glandular pattern. Some of these hyperplastic glands are seen embedded within superficial myometrium. Cervix shows nabothian cysts with mild endocervicitis. No evidence of atypia or malignancy. Ovaries and fallopian tubes are unremarkable.

### DIAGNOSIS:

#### Panhysterectomy:

- Moderate cystic endometrial hyperplasia.
- Superficial adenomyosis.
- Hyperplastic endometrial polyp.
- Cervical Nabothian cysts and mild endocervicitis.
- Negative for atypia or malignancy.
