PATHOLOGY REPORT

Clinical Information.	Rt. thyroid nodule.
Nature of specimen.	Total Thyroidectomy

GROSS:

Total thyroidectomy specimen was received as two lobes with an intact capsule. The first lobe measured 4 x 2 x 1.7 cm. Sectioning revealed a single, well-circumscribed gray nodule measuring 3.3 x 1.8 x 1.6 cm. The second lobe measured 3 x 1.2 x 1 cm, and upon sectioning, demonstrated a homogeneous, fleshy cut surface.

MICROSCOPIC:

Thyroid nodule shows a benign tumor composed of small follicular formations lined by active follicular cells with a small amount of colloid in the majority of follicles. Separating stroma is delicate and vascular. No evidence of vascular invasion or panmural capsular infiltration.

DIAGNOSIS:

Total thyroidectomy:

- Follicular adenoma.
- Negative for malignancy.
