Pt. Age:	62 years.	Gender:	Female
Received date:		Reported date:	2026-05-23
Referred By:	د/ عقيل الشامي		

PATHOLOGY REPORT

Clinical Information.	Hemorrhagic gastropathy with antral nodular pattern
Nature of specimen.	Endoscopic biopsies.

GROSS:

Received soft tissue fragments measuring in aggregate 0.6 cm, totally embedded.

MICROSCOPIC:

Gastric mucosa moderate infiltration by lymphocytes and plasma cells. Neutrophils are seen infiltrating glands thus indicating activity. H. pylori characteristic forms are seen colonizing glands.

DIAGNOSIS:

Stomach, endoscopic biopsy:

- H. pylori-associated chronic moderate gastritis with mild inflammatory activity.
- Negative for atypia and malignancy.
