### PATHOLOGY REPORT

Clinical Information.	Cervical lymph node excision biopsy. History of positive T test.
Nature of specimen.	Excision biopsy

#### GROSS:

Two soft tissue fragments collectively measured 2.5x2x1.3 cm, totally embedded.

#### MICROSCOPIC:

Lymph node shows caseating granulomas rich in epithelioid cells & Langhan's giant cells. Picture is consistent with a tuberculous etiology. No evidence of malignancy.

#### DIAGNOSIS:

##### Cervical Lymph node, excision biopsy:

- Caseating granulomatous lymphadenitis (Tuberculosis).
- Negative for malignancy.

#### Pathologist

Prof. Dr. Neveen Tahoun, MD, PhD
