

Pt. Name:	عبد الله مسعود ناجي سبيان		Lab Number:	3550-2026	
Pt. Age:	65 years.	Gender:	Male	Received date:	2026-05-20
Referred By:	م/ الإحسان		Reported date:	2026-05-25	

PATHOLOGY REPORT

Clinical Information.	Back skin lesion that was previously cauterized by the patient.
Nature of specimen.	Biopsy

GROSS:

Soft tissue fragments collectively measured 0.9x0.7x0.3 cm, totally embedded.

MICROSCOPIC:

Sections show ulcerated squamous epithelium and related focal dense infiltration by neutrophils and lymphocytes with capillary proliferation. There is underlying dense fibrosis. No evidence of specific granulomas. No evidence of malignancy.

DIAGNOSIS:

Back skin lesion, biopsy

- Active chronic inflammatory ulceration (non-specific) with cicatricial fibrosis.
- Negative for malignancy.
