PATHOLOGY REPORT

Clinical Information.	Panhysterectomy
Nature of specimen.	Panhysterectomy

GROSS:

Panhysterectomy specimen: the uterus measured 8.5 x 6.5 x 4.5 cm, the cervix measured 3 cm in length. On sectioning, the myometrial wall thickness measured 2.3 cm, and the endometrium measured 0.5 cm in thickness. Both ovaries measured 2 x 1 x 1 cm, each, and both fallopian tubes measured 5 cm long, each, all of which appeared unremarkable grossly.

MICROSCOPIC:

Endometrium is non-secretory and hyperplastic, it is formed of branching glands exhibiting focal moderate crowding and lined by 1-3 layers of cells. Glands show focal complexity of their contour. Stroma is cellular. Islands of these endometrial glands and stroma are seen entrapped superficial within myometrium. Cervix shows Nabothian cysts and mild endocervicitis. Both ovaries and tubes are unremarkable. No evidence of atypia or malignancy.

DIAGNOSIS:

Panhysterectomy:

- Moderate adenomatous (complex) endometrial hyperplasia.
- Superficial adenomyosis.
- Cervical Nabothian cysts with mild endocervicitis.
- Both ovaries and fallopian tubes are unremarkable.
- Negative for atypia and malignancy.
